

Quick and Simple Reverse NS Service to Retrieve Domains Sharing a Name Server

Getting a comprehensive list of domains with the same name server doesn't need to be complicated.

Name servers (NSs) are a critical part of the DNS infrastructure. Looking into the domains they serve can help organizations prevent NS abuse and detect associations with unreputable properties. But mapping NS connections manually requires high-level technical expertise. A DIY approach also takes time, which may result in an outdated list of linked domains. An easy-to-use service that gleans data from a regularly updated database can help entities keep track of their own or other entities' NS connections.

Understand NS connections better with a high-quality reverse NS lookup service.

Our reverse NS product line can provide a shareable list of domains served by the same NS within seconds. The tools are backed by our comprehensive DNS database that contains billions of DNS records, with millions of NS records added or updated every week. [Test](#) our reverse NS lookup service or [contact us](#) for more information.

Practical Usage

Retrieve a list of domains sharing the same NS to:

- Know which domains are associated with an unreputable or malicious NS
- Avoid getting your domains blocklisted by ensuring they aren't connected to shady NSs
- Check that your domains don't share NSs with suspicious domains
- Map an entity's NS connections following an acquisition, a merger, or a partnership

Billions
of DNS records

774M+
domains tracked historically

4.2B+
domains and subdomains

What Data Points Are Included?

Our reverse NS service searches our extensive DNS database for domains hosted on a given NS. See the table below for the data points it returns.

Type of Validation	Description
Domain name	Refers to the domain connected to the NS
Date first seen	The date when the connection was first detected
Date last updated	The date when the domain's NS record was last updated

What Reverse NS Service Delivery Models Do You Provide?

Delivery Model	Update Frequency
Reverse NS Lookup	Real-time
Reverse NS API	Real-time
Reverse DNS Search	Real-time
DNS Database Download	Daily, weekly, monthly

About Us

WhoisXML API aggregates and delivers comprehensive domain, IP, DNS, and subdomain data repositories. We have more than 52,000 satisfied customers from various sectors and industries, such as cybersecurity, marketing, law enforcement, e-commerce, financial services, and more. Visit whoisxmlapi.com or contact us at sales@whoisxmlapi.com for more information about our products and capabilities.
